ABOUT THE SLT

The entire device comes in a beautiful protective foam custom carrying bag. The soft bag accommodates 2 SLT wands, the articulating wand holder, (aim the SLT where you want it and walk away). The entire unit (bag) is smaller than a standard computer bag and weighs approximately 3 lbs with all components.

Now you can deliver sound into any part of the human body, through the power of light! The profound nature of energy allows for transference of frequency from sound to light, and then back to vibration inside the tissues of the body. Embedded sound travels through **all body cells** and light can transport the sound more deeply into the bones and connective tissue matrix(es) without physical limitations caused by scars or toxins. Utilize MP3 files that you already have or you can stream from the web. By using high index array LED's tuned to the full light spectrum (completely safe for human eyes), the body can now become the resonator and reservoir of sound.

SLT IN ACTION

How to Use the SLT with New Human Radio

The SLT InfraRed 680nm and 880nm near-infrared (LEDs) emit both red lights at once. Dual red/near infrared is proving to be extremely valuable in providing incredible gains in tissue health and body energy. This unit allows MP3 sound files to be carried through the light, into the body via subsonic transduction.

- + Improved skin tone and complexion
- + Enhanced circulation
- + Enhanced muscle recovery
- + Reduced acne, rosacea, and eczema
- + Reduced pain and inflammation
